Ayman Basali, MD, MSc
Pain Management

Robert Hutson, MD
Family Practice

Lee Ann O'Brien, PACP
Program Administrator

Kris Rohr, RN
Clinical Manager

A Track Record of Success

The Hyperbaric Medicine & Wound Healing Center at Wooster Community Hospital, which opened in 2002, has grown in size and in reputation, most recently receiving its fifth consecutive “Center for Operating Excellence” Award at the National Wound Healing Conference in Orlando FL. Of all the National Healing Corporation centers in the country, it is ranked in the top third.

Recently, the Center completed its second expansion of facilities, staff and services. Equipped with two hyperbaric oxygen chambers, including one that of its kind in Ohio, and a full staff of clinicians and physicians, the Center boasts a healing rate of 93% within 12 weeks - well over the national average of 80%.

Lee Ann O'Brien (pictured front and center) is the program director of the Hyperbaric Medicine & Wound Healing Center at Wooster Community Hospital where a multidisciplinary team of physicians and staff have achieved a wound healing rate of 93% within 12 weeks - well over the national average of 80%.

Hyperbaric Medicine & Wound Healing Center specializes in treatment of chronic wounds and non-responsive conditions, offering hospital-based outpatient wound care and hyperbaric oxygen therapy as well as disease management and diabetes care. In addition to tissue oxygenation, the center also employs the use of vascular studies, tissue culturing and pathology, revascularization, skin grafting and clinical or surgical debridement. Conditions treated include diabetic wounds of the lower extremities, pressure ulcers, soft tissue radiation injuries, necrotizing infections and compromised skin grafts and flaps.

A Focus on the Patient

The center treats patients with chronic and advanced conditions which have not responded to previous therapies. After performing a thorough exam of a new patient's wound, including taking photographs to track wound healing progress, the center's clinical staff becomes a partner with the patients doctor. Through regular reports and phone calls, the center works with the patient's doctors and other experts in the program to develop a total approach to treatment and care. Evidence-based and best practice driven treatments mean patients do not undergo any treatment or progress to a new level of treatment until the need is clearly indicated. Patients may self-refer; in most instances treatments are covered by Medicare, Medicaid and most insurance plans without requiring a referral.

Wound Care Specialists

Underlying conditions such as diabetes and vascular disease often delay healing of wounds. Doctors who refer patients to a wound center *include*:

Primary care physicians, internal medicine, general, orthopedic and vascular surgeons, cardiologist, endocrinologists, neurologists, podiatrists, physiatrists, dentists, oral maxillofacial surgeons, plastic surgeons, gynecologists, urologists, gerontologists, home health agencies, nursing home physicians, and emergency medicine specialists.
